

Senior Full Stack Engineer (Blockchain) – Technical Lead & Vendor Liaison

Role Overview

We are seeking a highly experienced Senior Full Stack Engineer with strong blockchain expertise to serve as the technical bridge between internal stakeholders and external vendors for a strategic Loyalty & Stablecoin blockchain initiative. This role combines hands-on technical capability with architectural oversight, vendor governance, and executive-level communication.

Key Responsibilities

- Review and validate blockchain architecture (Hyperledger Besu / permissioned networks).
- Act as primary technical interface between bank and external blockchain vendors.
- Translate business requirements into technical specifications.
- Govern vendor deliverables and ensure alignment with security and compliance standards.
- Oversee API design, system integrations, and smart contract architecture.
- Ensure scalability from Loyalty Phase to Stablecoin Phase.
- Participate in audit and regulatory discussions when required.

Required Qualifications

- Bachelor's or Master's degree in Computer Science, Engineering, or related field.
- 8+ years of full stack development experience.
- 3+ years of blockchain project experience.
- Experience in enterprise system integration and vendor management.
- Experience working in regulated environments (banking preferred).

Technical Skills

- Backend: Node.js / Java / Go, REST APIs, microservices.
- Frontend: React / Angular / Vue, secure authentication flows.
- Blockchain: Hyperledger Besu, EVM concepts, Solidity fundamentals.
- Infrastructure: VMware, Linux, HA/DR architecture basics.
- Security: HSM/KMS understanding, secure transaction signing flows.

Leadership & Soft Skills

- Strong architectural thinking and system design mindset.

- Ability to challenge vendors constructively and govern technical delivery.
- Excellent documentation and communication skills.
- Ability to translate complex technical topics to executive stakeholders.
- Risk-aware mindset suitable for financial institutions.

This position is ideal for a senior engineer capable of bridging business, infrastructure, and blockchain technology within a regulated banking environment.
